- · Data Loss Prevention
- Server Security
- Intrustion Prevention
- Proactive Endpoint Risk
- Management (PERM)
- Security Information and Event Management (SIEM)
- Specialized Threat Analysis and Protection (STAP)

2000s

Almost 50% of cloud security will be delivered by the cloud to protect

Threat intelligence based security products will be **10x** more valuable

20% of security markets will shift protecting people and their assets to securing "things" that communicate among themselves without direct human interaction

## **US Security Market Overview**

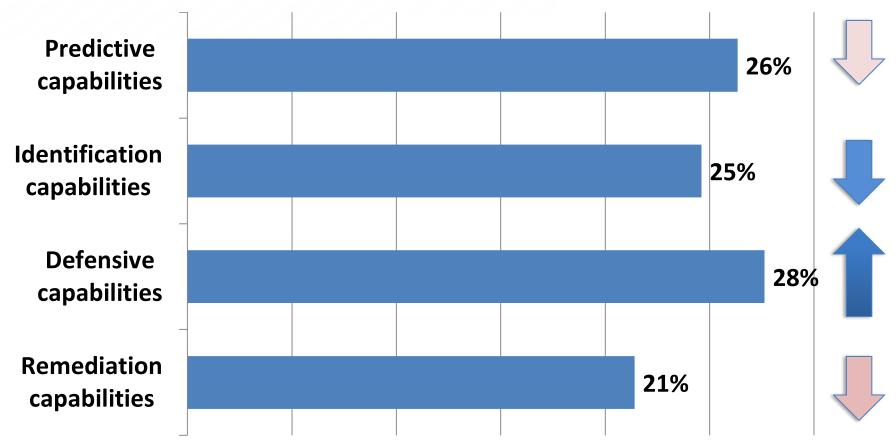

# Common 3<sup>rd</sup> Platform Security Technologies Unify Four Pillars

|            | Cloud   | Mobile  | Social Networks  | Big Data (Threat<br>Intelligence)   |
|------------|---|---|--|---|
|            | Early detection & mitigation of targeted, unknown attacks.  Granular logging and policy enforcement of internal and external regulations. |   |  |   |
| Predictive | Privileged Access Management, Federated Identity, Multi-factor Authentication, Data Protection, & Vulnerability Assessment                | Strong Authentication, Data Protection, Web/Messaging SaaS, & SSO | Data Loss prevention with data protection, global regulatory policy monitoring, & real-time policy enforcement & education | Raw & analyzed threat feeds from multiple sources integrated with management consoles |
| Proactive  | VPN, Single Sign-<br>On, Encryption, &<br>Strong Passwords  | Mobile Device<br>Management                                       | Keyword-based<br>monitoring &<br>logging   | Network<br>monitoring and<br>SIEM   |
| Reactive   | Access control  | Device Password   | Acceptable Use<br>Policy   | Signature-based detection   |

## Future Security Budget Changes

N = 303

Base=All Respondents

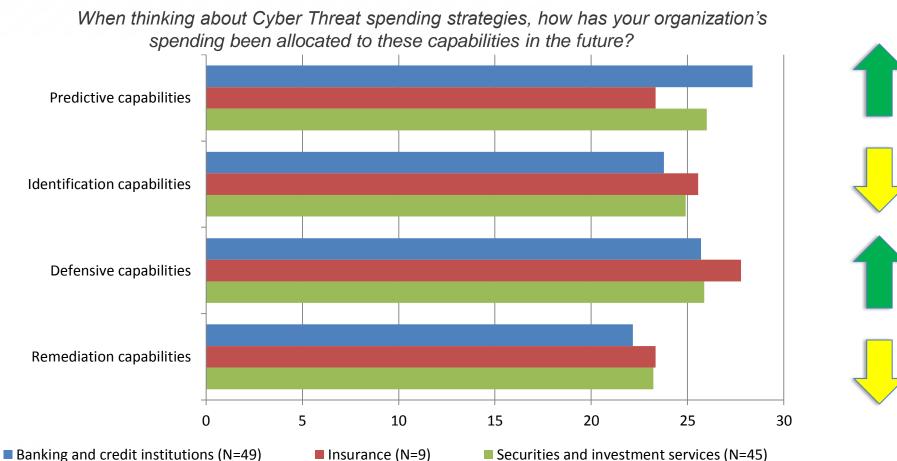

Note: Managed by IDC's Quantitative Research Group.; Data Not Weighted; Use caution when interpreting small sample sizes.

### Threat Intelligence Market

- Focus: Predictive threats detection
- Delivery: Raw data, analysis of raw data raw, distillation of existing data, remediation
- Customers: Internal, Quid pro Quo, External
- Future: Specialized by vertical, geography, platform, and malware.

## 3<sup>rd</sup> Platform Trends for 2015

Almost 50% of <u>cloud</u> security will

be delivered by the cloud to protect the cloud

Big Data-driven threat intelligence

security will be 10 times more valuable

than traditional technologies

Mobile security includes identity, 2-factor authentication, DLP, encryption, and mobile payments

Cyber weapons becomes a growth business to the detriment of the security community

Social Controls combine security, marketing, and Return on Investment

20% of security markets will shift from

protecting people and their devices to

"things" that have no users

<u>Privacy</u> moves from casual discussions to black book laws

<u>Analytics</u> becomes the differentiator in threat intelligence excellence

## Key Attributes for Successful 3<sup>rd</sup> Platform Security

- Design for common infrastructure, processes, technologies, products, and services that unite all four pillars of the 3<sup>rd</sup> platform
- Align business & security goals for a common POSTIVE outcome
- Continually run discovery and vulnerability management against all assets
- Regularly, test and update incident response processes
- Monitor all users (e.g., employees, partners, suppliers, resellers, customers, etc.) across all systems for anomalies, threats, and compliance
- Remember that security is a continuous compromise between use cases, shared risk, business requirements, user experience, and financial benefits across a broad spectrum of stakeholders
- Migrate security strategies from reactive to proactive and predictive

## Thanks!
